Extension Features:

Dragonpay Notification Parser

With this extension, you have an Dragonpay Notification Parser, meaning when Dragonpay Gateway receive a payment, it's automatically send an back-end server-to-server communication to your Ticketmaster postback URL, and this extension automatically update transactions status and orders within Ticketmaster, create eTickets and send it by email to customers.

Web Service Integration

Dragonpay Gateway send one single notification by transaction status update without resending if the communication was not received.

Short Internet connection interruptions are possible, and having missing paid transactions and missing update status on orders, invoices in

your Ticketmaster was not an option.

That why we integrated Dragonpay GetMerchantTxns - Web Service Method with Ticketmaster, we made it as a cron job (auto scheduled task) that must be run at least every 24 hours. It's synchronize your last 7 days transactions at Dragonpay to never missing transactions and order status update in Ticketmaster.

Test Mode

Allow you to use your Dragonpay test account and start testing orders and payments without real money transaction by selecting the "Bogus Bank Online" (with any id and password) or the "Bogus Bank Over-the-Counter".

Plugin Debug/log Mode

Option to use the plugin in debug mode.

Admin Notification

Option to receive an email notification for SUCCESS, CHARGEBACK or REFUND, Transactions.

Compatibility with Multi-Cart Redirector for Dragonpay (<http://siteshop.ph/multi-cart-redirector-for-dragonpay>)

With Multi-Cart Redirector, [share your Dragonpay account with multiple systems](#). Redirector broadcast communication to up to 25 different shopping cart installations ; Only one single Dragonpay account needed!

Prerequisites to use the extension:

- Dragonpay.ph merchant account (contact them in direct): <https://www.dragonpay.ph/merchants> (<https://www.dragonpay.ph/merchants>)
- Your own Joomla - tickemaster installation
